

# **BitFed CommunityGlobal Good Shops White Paper**

**A Global Physical Business Network Co-Built by the  
Community**

## I. Preface

The Next Evolution of Global Commerce In the past internet era, commercial networks were controlled by a handful of platforms. Platforms set the rules. Platforms hold the traffic. Platforms control the data. Platforms decide who gets seen and who gets recommended.

Hundreds of millions of merchants, promoters and consumers participate in the ecosystem, yet they can only operate within pre-set rules. Commercial networks keep expanding, but value keeps concentrating in fewer hands.

Today, a new era is emerging. A community-driven, open-participation, freely collaborative commercial network is taking shape.

### **In this network:**

- Commerce no longer belongs to a single platform.
- Traffic is no longer controlled by a single system.
- Value is no longer concentrated in the hands of a few companies.

Instead, the commercial network will be co-built by every single participant.

BitFed was born from this very philosophy.

### **We believe:**

The future business world should not be just the business of platforms. It should be an ecosystem co-created by the entire community.

The goal of Global Good Shops is not to build another centralized commercial platform, but to establish a global physical business network driven by the worldwide community.

As more merchants join, more community members participate, and more cities get connected, a new commercial ecosystem will gradually form.

**In this ecosystem:**

- Merchants own their customer base.
- Promoters have sustainable opportunities.
- Users participate in ecosystem growth.
- The community shares the collective value.

This is more than a commercial innovation. It is a transformation of commercial structure. What Global Good Shops aims to build is not merely a decentralized network, but a global physical business network linked together by the community.

## **II. The Birth of Global Good Shops**

**BitFed Community holds the belief:**

The future commercial network should not belong exclusively to platforms, but to the entire community ecosystem.

The goal of Global Good Shops is to build a **community-driven global commercial network**, where:

- Merchants gain sustainable customer flow

- Promoters earn consistent income
- Users participate in ecosystem growth
- Commercial value circulates freely within the community

Global Good Shops is more than just a merchant platform; it is a core commercial infrastructure of the BitFed ecosystem. It will connect:

- Global merchants
- Community users
- Merchant Promoters
- Commercial advertising systems
- Broker networks

Together, they build an open, free and collaborative commercial ecosystem.

### III. Global Good Shops Business Model

Global Good Shops focuses on **building offline physical business networks**. The platform does not develop pure online e-commerce businesses. Instead, it leverages digital technology to connect real offline physical merchants with community users, bringing new customer sources and consumption scenarios to physical commerce.

Merchant types supported by Global Good Shops include:

- F&B outlets
- Hotel & accommodation
- Daily life services
- Entertainment & leisure
- Travel services
- Retail stores

All merchants must be **genuinely operating offline physical businesses**.

Through the Global Good Shops platform, community users can use Nectar for consumption or redeem products/services in real offline scenarios. This model integrates the digital economy with physical commerce, providing new growth impetus for offline businesses.

### **Merchant Promoters**

Merchant Promoters are key builders of the Global Good Shops ecosystem. Their responsibilities include:

- Referring merchants to join the platform
- Helping merchants connect with community users
- Facilitating genuine commercial transactions

Merchant Promoters are not just promoters—they are **builders of the community commercial network**. Global Good Shops incentivizes more community members to participate in network building through the **Nectar Reward Mechanism**.

### **Community Users**

Community users are more than just consumers. They are also:

- Commercial disseminators
- Ecosystem participants
- Witnesses to platform growth

Every consumption behavior of users creates value for the ecosystem.

## **IV. Nectar Consumption & Merchant Settlement**

### **Mechanism**

In the Global Good Shops ecosystem, Nectar is not only an incentive carrier, but also a key consumption medium connecting the community with physical commerce.

BitFed has developed an innovative commercial settlement mechanism that enables seamless flow of community value into real business scenarios, while ensuring merchants' capital security and operational stability.

The core objectives of this mechanism are to achieve three things:

- Users can conveniently use Nectar for consumption
- Merchants always receive settlements in fiat currency
- Commercial transactions are completed efficiently and securely

Through this structure, Global Good Shops has built a consumption system that balances both the digital ecosystem and physical commerce.

### **Nectar Consumption System**

In the Global Good Shops ecosystem, community users can use Nectar for consumption or redeem products/services at physical merchants that support BitFed. Users' consumption behaviors are directly integrated into the Global Good Shops commercial network.

This model closely links the community economy with offline physical commerce, turning ecosystem activity into real offline business vitality.

### **Merchant Fiat Currency Settlement**

To ensure the operational stability of physical merchants, Global Good Shops adopts a **fiat currency settlement mechanism** in its transaction structure design. No matter what payment method users choose, merchants will always receive settlements in fiat currency.

This mechanism means: Merchants do not need to bear the risks associated with Nectar assets, nor do they need to change their original business models. For

merchants, Global Good Shops is both a new customer source and a safe, reliable settlement system.

### **Efficient Settlement System**

After users complete consumption and merchants confirm order redemption, the system initiates the settlement process. Through the internal circulation mechanism of the Global Good Shops ecosystem, order amounts are cleared in a short time and settled to merchants in fiat currency.

Under normal circumstances, the settlement process is completed **within 15 minutes**.

This mechanism greatly improves the capital turnover efficiency of physical merchants and builds a solid foundation of commercial trust for platform transactions.

### **Stable Commercial Circulation Mechanism**

Global Good Shops has designed a stable commercial circulation mechanism in its ecosystem architecture to support value conversion between community consumption and physical commerce. This mechanism operates through multi-party collaboration, ensuring high efficiency, security and stability of transactions. For community users, the consumption experience is always simple and straightforward. For physical merchants, the settlement process is always stable and transparent.

This structure allows Global Good Shops to build a long-term, sustainable connection between the digital community and physical commerce.

### **Building a Merchant Trust System**

What physical merchants care about most is always capital security and settlement efficiency. Global Good Shops provides a stable and reliable business environment for merchants through the **fiat currency settlement + fast clearing mechanism**.

Merchants do not need to understand complex technical architectures, nor do they need to bear additional financial risks. They only need to focus on their own products and services, and they can connect with a wider range of community users through Global Good Shops.

## V. Merchant Promoter Incentive System

To encourage community members to participate in building the global commercial network, BitFed Community has launched the Merchant Promoter **Incentive Mechanism**.

### 1. Regular Merchant Promoters

When successfully referring a merchant to join the platform:

- One-time reward: 20 Nectar per merchant

In addition, when the merchant generates genuine orders and completes redemption:

- Earn 25% Nectar reward based on the order amount

### 2. Senior Merchant Promoters

When accumulating **20 successful merchant referrals**:

- Upgrade to Senior Merchant Promoter

Rewards:

- Onboarding reward: 30 Nectar per merchant

- Order reward: 20% Nectar reward

### 3. City Managers

When successfully onboarding 50 merchants:

- Eligible to apply as a City Manager

Rewards:

- Onboarding reward: 50 Nectar per merchant
- Order reward: 5% Nectar reward
- Monthly community incentive: 500 Nectar

City Managers become the core drivers of urban **commercial networks**.

## V. Sources of Nectar Value

Nectar is not an incentive created out of thin air. It comes from genuine business activities.

Its main sources include:

- Merchant transaction growth
- Merchant promotion services
- Platform commercial cooperation
- Advertising promotion systems

As the scale of Global Good Shops merchants expands and commercial transactions grow, ecosystem value continues to accumulate. Nectar will become an **important value carrier connecting the entire commercial ecosystem**.

## VI. Open Principles of Global Good Shops

BitFed Global Good Shops adheres to the community principles of openness and freedom. Any qualified merchants and community members can participate in ecosystem building.

The platform imposes no restrictions on:

- Merchant industry types
- Merchant geographical distribution
- Community promotion methods

Global Good Shops aims to form a global commercial network through community collaboration.

## VII. Decentralized Governance Philosophy

Although Global Good Shops is supported by technical platform infrastructure, its development philosophy is rooted in the spirit of **community collaboration**.

BitFed Community encourages:

- Open participation
- Free access
- Fair competition

Community members co-build the commercial network and share in the growth of the ecosystem together.

## VIII. Anti-Cheating & Ecosystem Security

Global Good Shops encourages genuine business activities and adopts a **zero-tolerance policy for fraudulent transactions**.

The following behaviors are deemed serious violations:

- Merchants colluding with Promoters to create fake orders
- Fake consumption redemption
- Exploiting system vulnerabilities for reward arbitrage
- Mass creation of virtual transactions

Once discovered, the community will take the **strictest disciplinary measures**, including but not limited to:

- Permanent account ban
- Recovery of all ill-gotten Nectar rewards
- Freezing of account assets
- Public community announcement

Serious violations will result in inclusion in the **community credit blacklist**.

BitFed Community firmly believes: Only genuine commerce can build a long-term sustainable ecosystem.

## IX. Ecosystem Collaborative Development

Global Good Shops is more than just a merchant platform. It will drive the development of the entire BitFed ecosystem, including:

Broker networks

- Community promotion systems
- Commercial advertising ecosystems
- Merchant service systems

As the ecosystem scales up, Global Good Shops will become one of the **most important commercial infrastructures** of BitFed.

## X. Future Development Vision

The goal of BitFed Global Good Shops is to build a **global commercial network co-created by the community**.

In the future, we hope to see:

- Hundreds of thousands of merchants joining the ecosystem
- Global community users participating in consumption
- Merchant Promoter networks spreading across the world

We aim to make commercial value no longer belong exclusively to platforms, but to the **entire community ecosystem**.

## XI. Why Global Good Shops Will Succeed

### Business Logic Analysis

The success of Global Good Shops does not only come from technological innovation, but from a **more rational commercial structure**—one that solves three long-standing core problems of traditional platforms.

### 1. Genuine Commerce Drives Ecosystem Value

Many digital projects lack real business scenarios, making it difficult to sustain ecosystem value. Global Good Shops is built on a **genuine offline physical business network**. Every physical merchant and every genuine consumption activity continuously creates value for the ecosystem. As the number of merchants

and the scale of commercial transactions grow, the entire ecosystem will form a sustained **growth commercial cycle**.

## 2. Community Promotion Network Enables Low-Cost Expansion

Traditional platform expansion relies on massive advertising investment with extremely high costs. Global Good Shops drives development through its **community Merchant Promoter network**. Promoters earn consistent rewards by referring merchants and facilitating consumption, allowing the platform to achieve rapid expansion and low-cost growth through community power.

## 3. Physical Merchants Gain Genuine In-Store Traffic

Traditional internet platforms often rely on online traffic distribution. Global Good Shops directly connects **community users + local physical merchants, enabling merchants** to gain genuine in-store customers.

This model helps physical merchants:

- Reduce customer acquisition costs
- Improve customer repurchase rates
- Build long-term customer relationships

## 4. User Consumption Participates in Ecosystem Growth

In the traditional commercial system, consumers are just simple buyers. In the Global Good Shops ecosystem, users are more than just consumers—they are **ecosystem participants**. Every consumption behavior drives the development of the entire commercial network, and users become an important force in ecosystem growth.

## 5. Open Global Commercial Network

Global Good Shops is not a closed community. Physical merchants from any city or country can join the ecosystem as long as they meet the requirements. Through the expansion of the community network, Global Good Shops will gradually form a **cross-regional commercial network system**.

## XII. Why Merchant Promoters Are the Most Important Role in the Future

In traditional internet platforms, promoters are often just auxiliary roles. They help platforms bring in users and merchants, but rarely get to truly share in the value of platform growth. In many platform systems, promoters only earn a **one-time commission**—once the promotion is completed, the relationship ends. This model cannot create real long-term motivation.

### Merchant Promoters Are Not Just Promoters

In the Global Good Shops ecosystem, Merchant Promoters are not just simple promoters—they are **builders of the commercial network**. Every merchant onboarded by a Promoter becomes part of the global commercial network; every physical store that joins enriches the entire commercial ecosystem.

In a sense: What Merchant Promoters do is not "helping the platform recruit merchants"—it is **participating in building a global commercial network**.

### Merchant Promoters Are Building Urban Commercial Nodes

When more and more physical merchants in a city join the Global Good Shops ecosystem, the city gradually forms a **community commercial node**. Every

merchant onboarded by Promoters strengthens this node. Over time, these nodes will connect to form a larger commercial network —and when the network is large enough, its value will far exceed that of a single platform.

### **Merchant Promoters Have Real Long-Term Opportunities**

Traditional promotion systems only offer short-term earnings. In the Global Good Shops ecosystem, Merchant Promoters have **long-term income sources**: as long as

merchants continue to operate and genuine orders keep coming, Promoters will earn consistent rewards.

This structure transforms Merchant Promoters from mere promoters into **early builders of the commercial network**. In any commercial system, those who participate in building the network early are always the first to seize opportunities.

## **XIII. Merchant Promoters Are the Primary Driving Force of the Commercial Network**

The growth of any commercial network cannot do without early drivers. These drivers:

- Connect merchants
- Spread the philosophy
- Expand the market

Their actions determine the speed of network growth. In the development of Global Good Shops, Merchant Promoters are exactly these drivers—they not only push merchant onboarding, but also drive the development of the entire ecosystem.

### **A Transformation of Commercial Structure**

Global Good Shops does not want community members to become employees of a certain platform. Instead, we want every participant to become a **builder of the ecosystem**.

The role of Merchant Promoters perfectly embodies this philosophy: they are not working for a platform, but participating in building a much larger global

commercial network. When more and more people realize this, Global Good Shops will no longer be just a community project—it will become a genuine **community-driven global commercial ecosystem**.

### **Conclusion**

When one person promotes one merchant, they may only earn a one-time reward.

But when more and more people start connecting merchants, connecting cities, connecting communities—a global commercial network is taking shape.

In this network, every early participant is a builder of the ecosystem.
