

B.FED Global Market Builder Program

Effective Date: 09/16/2026

Dear B.FED Community Members,

As Honey (HNY) gradually enters the liberalized-market phase, B.FED is transitioning from its past community-driven development mechanism into a new stage fueled by real users, genuine transactions, organic liquidity, and global-market participation.

To encourage more community members to take part in global-market development, B.FED is officially launching:

Global Market Builder Program

This program follows a straightforward framework:

- Earn trading-fee rebates by onboarding real users;
- Generate market-making income by building market liquidity;
- Receive market-management rewards by growing active teams.

All rewards are tied to real-world market activity and actually generated trading fees. No ongoing earnings are granted for simple registrations. No income is generated merely by holding HNY. Promotion rewards will not be paid out via newly minted HNY tokens.

I. Available Revenue Streams for Participants

Participant earnings fall into three distinct categories:

Participati on Role	Your Responsibilities	Source of Your Earnings
Market Promoter	Onboard new real users to participate in trading	Actual trading fees generated by referred users
Market-Ma ker	Provide bid-and-ask liquidity for the HNY / USD-C market	Bid-ask spread + market-making trading mechanisms

Market Builder	Recruit and maintain a genuinely active trading team	Management rewards generated by your team's real-world-market activity
----------------	--	--

Critical note: No real-world trades mean no trading fees. No trading fees mean no promotion rebates. This program rewards participants who deliver tangible market value.

II. Part 1: Market-Promotion Rewards

1. Eligibility for Promotion Rewards

Any qualifying community member may invite new community members using their unique invitation link.

Important caveat: Registration alone does **not** qualify a user as an active valid participant.

A user must satisfy **all** of the following criteria to become a valid market participant:

1. Complete account registration;
2. Finish identity verification (KYC);
3. Execute at least one qualifying trade on the HNY / USD-C market;
4. Exhibit no rule-breaking behavior, volume farming, or wash-trading.

Only users meeting all requirements count as valid market participants.

2. Trading-Volume Eligibility Rules

A valid referred participant is defined as a user who completes their first qualifying HNY purchase via a valid referral relationship. The first purchase must have a minimum executed value of 50 USDC, generate actual valid trading fees, and pass system risk-control reviews.

Selling HNY alone does **not** satisfy the first-trade requirement for valid-participant status. Once a user earns valid-participant status, their subsequent eligible buy, sell, and other compliant market trades are no longer subject to this threshold rule.

III. Calculation of Promotion Rewards

There is one core formula for this reward component:

Promotion Reward = Valid Actual Trading Fees Paid by Referred User $\times$ Your Promotion Commission Rate

Important clarification: Calculation uses **generated trading fees**, **not** total trade value. Workflow: A trade generates fees $\rightarrow$ fees are received by the community $\rightarrow$ a predefined percentage of those fees is allocated to the promoter.

Simple Example

User John signs up through your referral link and places a trade worth 100 USD-C. This trade generates 0.02 USD-C in trading fees. If your promotion tier is 10 %:

Your reward = $0.02 \times 10\% = 0.002$ USD-C Community retains the remaining 0.018 USD-C

Promoters only earn rebates when referred users conduct genuine, active market-trading activity.

IV. Promotion Tiers

Tiers are determined by your current count of valid active participants and your market-building performance.

Tier	Current Valid Participants	Qualified Market-Makers	Direct Trading-Fee Commission Rate
B1	≥ 3	—	10%
B2	≥ 10	≥ 1	15%
B3	≥ 20	≥ 3	20%
B4	≥ 50	≥ 10	25%
B5	≥ 100	≥ 20	30%

Definition of **Current Valid Participants**: community members who remain active and complete qualifying market trades. Users who registered in the past but have long-since ceased market

activity will **not** be counted. Performance is measured by how many genuinely active market participants you build — not raw total sign-ups.

V. Referral Relationships Are Permanent Upon Creation

The referral link used during a new user's very first registration establishes their sole referral relationship. After registration:

- Referral assignments cannot be changed;
- Rebinding is prohibited;
- New referral relationships cannot be created by re-registering existing users;
- Every user maps to exactly one direct referrer.

This policy ensures clean, stable market-referral architecture.

VI. Critical Note: Legacy Referral Relationships

B.FED possesses a large set of historical referral records originating in the community's early era.

These historical records will **not** be deleted, as they represent permanent community-development archives.

However: Legacy referral relationships $\neq$ new free-market referral relationships.

Upon the official launch of this market-builder incentive program, pre-existing historical referral links will **no longer** generate new free-market trading-fee rebates.

Scenario Example

User A referred User B during the community's early phase, and B already held HNY tokens. After the free-market launch: any subsequent HNY buys, HNY sells, or HNY/USD-C trades completed by B will **not** generate new fee rebates for A under the old historical referral link.

VII. Program Rationale for This Rule

This incentive framework rewards **new market development**, not historical referral connections.

If legacy referral relationships perpetually generated fee rebates, future trading activity from dormant historical accounts would trigger endless cascading retro-commission liabilities. This outcome would harm market health and contradict the core logic of the new free-market incentive system.

Accordingly:

- Historical referral records remain intact;
- Historical user assets remain unchanged;
- Historical datasets are preserved;
- Free-market fee rewards apply exclusively to newly constructed market-builder relationships.

VIII. Critical Rule: Transferring Legacy HNY to New Accounts

Example scenario: User A holds 1 000 HNY and transfers 500 HNY to User B. User B then registers a brand-new account using A's referral link and sells that 500 HNY on the open market.

Under this scenario, User A earns **zero promotion-fee rebates** from trading activity tied to those 500 HNY.

Rationale: This activity constitutes a transfer of pre-existing assets, not fresh capital entering the marketplace.

Asset transfers are not equivalent to new market contributions.

IX. Normal HNY Transfers Remain Permitted

B.FED will not block legitimate asset transfers to mitigate potential arbitrage. Users may freely execute:

- Token transfers;
- Gifting of tokens;
- Intra-family asset movement;

- Peer-to-peer transfers among friends.

Nevertheless: HNY token transfers by themselves never confer promotion-reward eligibility.

The system employs risk-detection logic evaluating asset provenance, account linkages, and trading patterns. The following patterns may disqualify corresponding trades from reward eligibility:

Asset transfer → new-account creation → concentrated trading activity → artificial generation of promotion fees
Multi-account circular transfers → buy orders → sell orders → artificially inflated trading-fee output

In severe cases, the community may impose account restrictions or other disciplinary measures per market rules.

X. Part 2: How Market-Makers Generate Income

Market-maker revenue operates independently from promoter-fee rebates. Promoters earn fee-share rebates; market-makers primarily capture bid-ask-spread income.

XI. Definition of a Market-Maker

In simple terms: a market-maker submits both buy-side and sell-side limit orders to the order book simultaneously.

Example:

- You post a bid: Buy HNY @ 1.00 USD-C
- You post an ask: Sell HNY @ 1.02 USD-C

The 0.02 USD-C gap between these two prices represents your spread. When market conditions remain stable and orders continuously fill, the market-maker realizes profit from this bid-ask spread.

XII. Trading-Fee Schedule for Market-Makers

Fee schedules differentiate regular participants and official market-makers:

Participant Type	Maker (Limit-Order Fill)	Taker (Aggressive Order Fill)
------------------	--------------------------	-------------------------------

Regular User	0.02%	0.05%
Market-Maker	0%	0.01%

XIII. What Is a Maker?

A **Maker** submits a resting limit order that sits on the order book and gets filled by another market participant.

Example: You place a resting order: “Buy 100 HNY @ 1.00 USD-C.” Another user sells into your open order. This counts as a Maker fill.

Market-Maker Maker Fill Fee Rate = 0 %

XIV. What Is a Taker?

A **Taker** executes an aggressive order that immediately consumes pre-existing resting orders on the book.

Example: Someone else has posted a resting sell order for HNY at 1.02 USD-C. You execute an instant market buy that takes liquidity from that existing order. This counts as a Taker fill.

Market-Maker Taker Fill Fee Rate = 0.01 %

XV. Market-Makers Do Not Receive Permanent Zero-Fee Treatment

Market-maker status does **not** guarantee zero fees for every transaction:

- Passive limit-order Maker fills → 0 % fee
- Aggressive Taker orders that consume existing liquidity → 0.01 % fee

Market-makers derive primary profits by supplying liquidity and capturing bid-ask spreads.

XVI. Promotion Rewards for Referred Market-Makers

If you refer a new market-maker who meets all below criteria:

- Completes the official market-maker application;
- Satisfies collateral-staking requirements;
- Consistently submits required market quotes;
- Fulfills minimum qualifying market-making uptime;
- Exhibits no rule-violating conduct;

you will receive a commission share calculated from the valid trading fees actually paid by that referred market-maker.

Market-Maker Referral Commission Schedule

Promotion Tier	Market-Maker Fee-Share Commission
B1	5%
B2	8%
B3	12%
B4	15%
B5	20%

XVII. Common Misconception Clarification

Bid-ask-spread profits earned by a market-maker are **not** counted toward referral-fee calculations.

Illustrative case:

- Market-maker buys HNY @ 1.00 USD-C
- Market-maker sells HNY @ 1.02 USD-C
- Realizes 0.02 USD-C spread profit

This spread gain belongs exclusively to the market-maker; the referring promoter collects **no cut from this spread**.

Promoters only earn commission on actual trading fees disbursed by the referred market-maker.

Example: A referred market-maker generates 1 USD-C in Taker-order trading fees. A Tier-B3 promoter receives the 12 % commission rate.

Promoter payout = $1 \times 12\% = 0.12$ USD-C Remaining fee revenue retained by the community = 0.88 USD-C

XVIII. Benefits of Becoming a Market-Maker

Market-makers have three separate income sources:

1. **Bid-ask spread:** Primary profit stream for market-making activity.
2. **Zero-percent Maker fees:** No trading fee when your resting limit order gets filled as a liquidity provider.
3. **Market-maker referral system:** Market-makers may also earn commission rebates by recruiting additional qualified market-makers.

Market-maker income comes from market-trading activity and liquidity provision — not hand-out rewards.

XIX. Part 3: Market-Builder Management Rewards

Simple referral outreach only brings in a small circle of contacts. A true Market Builder accomplishes substantially more:

- Organize and develop trading teams;
- Nurture active trading-participants and onboard qualified market-makers;
- Sustain ongoing market-team engagement;
- Support team members in resolving market-related issues;
- Drive genuine trading-volume activity.

For participants who satisfy team-building benchmarks and sustain real-world market engagement, B.FED offers **monthly market-management rewards**.

XX. Market-Builder Rewards Are Not Fixed Salaries

These monthly payouts are **not unconditional guaranteed wages**. Monthly eligibility depends on meeting ongoing monthly market benchmarks:

- Teams producing zero real-world trades → zero management reward

- Large headcount with zero meaningful market activity → zero management reward

XXI. Market-Builder Tiers

Tier	Current Valid Participants	Qualified Market-Makers	Monthly Qualified Trading Volume	Monthly Management Reward
M1 Market Builder	≥ 20	≥ 1	$\geq 10,000$ USD-C	100 USD-C
M2 Market Builder	≥ 50	≥ 3	$\geq 30,000$ USD-C	300 USD-C
M3 Market Director	≥ 100	≥ 5	$\geq 100,000$ USD-C	600 USD-C
M4 Market Director	≥ 300	≥ 10	$\geq 300,000$ USD-C	1,200 USD-C

Note: “Valid Participants” refers only to users actively completing real-world trades, not total historical registrations.

XXII. Monthly Team-Count Reset Policy

Total accumulated valid-participant counts do **not** reset to zero every calendar month.

Example:

- September: you hold 3 valid participants
- October: you add 7 new valid participants If your original 3 participants remain continuously active: total valid participants = $3 + 7 = 10$.

Nevertheless, participants who discontinue market-trading activity long-term drop out of your valid-participant tally. Team headcount can accumulate over time, yet continuous user-activity is mandatory to maintain tier qualification.

XXIII. Summary of Earning Pathways

1. You refer a genuine new user. The referred user executes trades → trading fees are generated → you collect fee-share rebates.

2. You refer a qualified market-maker. The market-maker executes trades → actual trading fees accrue → you receive your corresponding commission percentage. Separately, the market-maker earns independent profit from bid-ask spreads.
3. You build and sustain a genuinely active trading team. Your team generates substantial real-world-trading activity. When monthly criteria are satisfied, you receive monthly market-management rewards.

XXIV. Distinction Between the Three Income Streams

Income Type	Source of Earnings
Promotion Trading-Fee Rebates	Actual trading fees generated by referred participants
Market-Making Income	Bid-ask spreads plus market-making trading mechanisms
Market-Management Rewards	Real-world market activity produced by your team

- Promoters profit from fee-sharing rebates
- Market-makers profit from market bid-ask spreads
- Market-Builders profit from team-activity-based management rewards

These three revenue sources operate independently and must not be conflated.

XXV. Scenarios That Generate Zero Rewards

No promotion rewards will be issued for any of the following behaviors:

- Account registration with zero follow-up trading;
- Solely holding HNY tokens without trading;
- Pure HNY token-transfer operations;
- Legacy historical referral relationships;
- Trades executed by historically-referred users under the old referral framework;
- Wash-trading across multiple self-owned accounts;
- Artificial self-matching trades;
- Circular-loop trading patterns;
- Manufactured fake trading volume;
- Token-transfer schemes designed to create artificial referral-eligible trades;
- Any other activity classified as non-genuine market behavior.

XXVI. Core Principle Governing Trading-Fee Calculations

Every promotion reward is calculated exclusively against finalized, confirmed valid trading fees. No commission is generated for any trade under these conditions:

- Zero-fee transactions;
- Fee rebates or fee refunds applied;
- Trade-fee cancellations;
- Trades flagged as anomalous or high-risk;
- Situations where no net valid fee revenue is realized.

XXVII. Market-Security & Risk-Control Rules

B.FED incentivizes authentic market construction and prohibits artificial volume-manufacturing tactics.

High-risk behaviors subject to strict risk review include:

- Wash-trading
- Matched orders between linked accounts
- Circular token transfers followed by manufactured trades
- Bulk mass-account registration
- Fictitious sham trades
- Intentional artificial fee generation
- System-exploit tactics to improperly claim incentives

Upon detection of prohibited activity: The community reserves authority to revoke improperly-obtained rewards and may restrict accounts from participating in incentive programs, according to circumstance. Major centralized trading platforms' affiliate programs similarly exclude market manipulation, self-trading, and bulk-account abuse.

XXVIII. B.FED Foundational Philosophy

We do **not** reward raw registration numbers. We reward tangible value delivered to the marketplace.

Example 1: A user registers 100 new accounts, yet none of those accounts execute trades. Zero trading fees accrue → zero ongoing promotion rebates.

Example 2: A builder acquires only 10 truly engaged participants, and every one of those participants consistently trades on the market. This builder delivers meaningful real-world market contributions.

A market-maker cannot earn income merely by holding market-maker status without actually supplying liquidity. A team with large headcount but zero genuine market-trading output cannot qualify for management rewards.

XXIX. Full Program Feedback Loop

Community Members → Authentic market-participation → Real-world HNY × USD-C trading activity → Market generates trading fees

A portion of collected fees funds the Global Market-Builder incentives → Rewards are distributed to qualifying promoters and market builders → Additional community members join the ecosystem → Increased market liquidity → A more complete global marketplace.

This defines the Global Market Builder Program: it rewards collaborative market construction, not simple user recruitment.

Closing Remarks

- Market Promoters earn rebates derived from real-user-generated trading fees.
- Market-Makers generate returns from bid-ask spreads and liquidity provision.
- Market-Builders receive management rewards tied to their teams' authentic market-trading performance.

B.FED Community Asset Management & Operations Team
